Country Economic Situation

After falling sharply in 2020, GDP is projected to expand by 4.3% in 2021 and 3.2% in 2022. Lockdowns and uncertainty are weighing on activity, although government support has mitigated the effects on firms and households. Substantial job creation, especially for the low-skilled, women and youth, will return only in 2022, when an effective vaccine is expected to have been deployed widely, stimulating consumption, and easing precautionary saving. Investment and exports are expected to recover gradually alongside the manufacturing sector. Supportive fiscal policy is resulting in rising public debt levels, but interest rates are projected to remain low. Higher growth is needed to improve the fiscal position in the medium term.

^{*} The result as at the end of 2020 is affected by the effects of the global economic situation strongly conditioned by the pandemic; this figure was also heavily influenced both by extraordinary and unrepeatable charges and by the credit exposure write-down policies, for which a rather prudent approach was followed.

At the end of March 2020 the Libyan Foreign Bank increased UBAE share capital by approximately Eur 101 million to strengthen the Bank's activity as well its solvency ratios.
